

## **Technical Oversight Team Reviews**

### **Second Quarterly Report – Clemson University, Data Needs Assessment**

**Reviewer#1** - My only comment besides everything looks good and is on schedule is with the Folder 18 of Task 2 notes file. Is there an opportunity for states to submit 3-5 species that they feel represent keystone or guild species to broaden the approach of the indicator species? I'm wondering why black bear was used when it is doing quite well in Tennessee and most other APP states- even expanding to suburban areas? On the other hand maybe I'm missing the point of this file.
